

Introduction to Climate Change Issues

1 day briefing workshop

Climate change affects all parts of the economy; more and more organisations are having to think about how they need to respond in order to move sustainably into a low carbon economy.

Responses may include strategic accounting for carbon intensity of an organisation, energy efficiency programmes, carbon offsetting, management of carbon embodied in products and /or supply chain etc

This intensive briefing is designed to give organisational management an overview of the strategic issues and risks facing businesses as they respond to Climate Change.

Sessions will include :

- ***background to climate change – the science and international/national responses***
- ***how climate change can affect different types of businesses at different points in their value chain***
- ***how climate change impacts in the supply chain can affect organisations***
- ***frameworks for strategic responses***
- ***the management of compliance and reporting obligations emerging from government strategies to mitigate and manage the impacts of climate change on the countries and their economies.***
- ***the range of national and international schemes and standards that may impact an organisation***

Delegates do not require any prior climate change knowledge to attend this workshop.

Public sessions are normally held at the Warwick Business School, Coventry. UK; bespoke courses can be arranged in a venue to suit the client, subject to suitability for training purposes.

Dates of public courses will be published on our website and will be notified to clients that have expressed interest in the courses. Bespoke courses can be arranged at any time, by mutual agreement.

Indicative Delegate Fee : £375 plus VAT

Multiple delegate discounts are available, please contact Future Perfect for more details.
